Registrations across all the thematic workshops. Averaging 75 per session

WHAT A YEAR

We look back at a successful second year of the Empowering EU-ISACs project. Involvement of sectors keeps on growing and ISACs are becoming more self supporting. In this project, we aim to mobilize public and private actors to establish and further develop European level sectoral ISACs and to promote horizontal and structured coordination between the various European level sectoral ISACs. By supporting existing EU ISACs and facilitating the establishment of EU ISACs in sectors where no such initiatives are present, the project contributes to a strong and cyber resilient European network of cyber security information-exchange and cooperation.

https://www.isacs.eu/how-we-support-you

NEXT STEPS

For next year, we have more in store for the European level sectoral ISACs. We will continue to deliver our support to the ISACs that we have supported this year and expand into new sectors, aiming to support most of the sectors mentioned in the NIS Directive. If you think we can be of assistance in the creation or further development of an EU ISAC in your sector, then reach out to us:

EMPOWERING

EU - ISACs

BY THE NUMBERS 2021

Examples of how the consortium supports EU ISAC initiatives

Financial sector | Cities | Aviation sector | Railway | Water sector | Telecom sector | Internet Exchange | Health | Energy sector

European Cities ISAC (I4C+)

The consortium has been closely involved and supporting the MajorCities EU project in setting up the European Cities ISAC (I4C+). Following the steps of a blueprint for the establishment of ISACs, we actively assisted the founding members with (amongst others) discussing the (common ground in) interests of parties involved and determining the scope, mission and objectives of the ISAC. The Chair of I4C+ contributed to the annual conference of our project.

European Water ISAC

The support of the EW ISAC in 2021 focused on establishing a group of founding members and organizing several information-sharing sessions. A large two-day event took place in Q4, with over 40 participating organizations. A focus for 2021 was the integration of the efforts and services of another European cyber security initiative in the water sector by the name of STOP IT. In addition, the EW has been introduced to the Empowering EU ISACs information-sharing platform which they will make use of in 2022.

European Health ISAC

The consortium has been stimulating the initiation of a European Health ISAC initiative. As a new ISAC initiative, the focus is on mobilizing potential members to join the initiative and kick starting the ISAC. With the support of ENISA and the EC, a first group of approximately 15 organizations have been involved. The consortium facilitated several meetings in 2021 to explore the set up of the ISAC and a first information-sharing session took place. Four participating organizations shared presentations on several topics and another quarterly session is scheduled for Q1 2022.

EXAMPLES OF DELIVERABLES OF THE PROJECT

Information Sharing Platform

A platform to share information in a trusted environment and infrastructure. File sharing, chat, planning, conferencing and mailing lists based upon NextCloud.

Threat Sharing Platform

A platform to share threats in a trusted environment and infrastructure based upon MISP.

Operational Support to ISAC initiatives

Mobilisation of participants, organizing meetings, preparing templates for the 'Terms of reference', 'NDA' or a website for the ISAC.

EXAMPLE OF A DELIVERABLE

Empowering EU ISACs: setting up an ISAC

For new sectors we have a structured approach and blueprint to start an EU ISAC. Building trust, governance and organization and clear way of working.
