WHAT A YEAR

We look back at a successful first year of the Empowering EU-ISACs project. In this project, the consortium consisting of Capgemini Invent, TNO, Intrasoft, DFN-CERT and Spark Legal Network aims to mobilise public and private actors to establish and further develop European level sectoral ISACs and to promote horizontal and structured coordination between the various European level sectoral ISACs. By supporting existing EU ISACs and facilitating the establishment of EU ISACs in sectors where no such initiatives are present, the project contributes to a strong and cyber resilient European network of cyber security information-exchange and cooperation.

NEXT STEPS

For next year, we have more in store for the European level sectoral ISACs. We will continue to deliver our support to the ISACs that we have supported this year and expand into new sectors, aiming (but not limited to) the Health, Water, Nuclear, Cloud, Top Level Domain, Telecom, Aviation and Road Transport Sector.

If you think we can be of assistance in the creation or further development of an EU ISAC in your sector, then reach out to us:

EUISACS.NL@CAPGEMINI.COM

We hope to e-meet you soon!

This project has received funding from the European Commission's Directorate General CNECT under grant agreement number SMART2018/1022. The sole responsibility for the content of this outing lies with the Empowering EU ISACs Consortium and in no way reflects the views of the European Union.

BYTHE 20 NUMBERS 20

Examples of how the consortium supports EU ISAC initiatives

Maritime (sub)sector

Railway (sub)sector

For the

European **Maritime ISAC**

The consortium has been closely involved and supporting the EM ISAC since its establishment. Following the steps of a blueprint for the establishment of ISACs, we actively assisted the founding members with (amongst others) discussing the (common ground in) interests of parties involved and determining the scope, mission and objectives of the ISAC. The consortium also helped with the development of an introductory presentation about the EM ISAC which is also used for outreach to new potential members.

For the

European **Railway ISAC**

The support of the ER ISAC in 2020 took several forms. To highlight one example, the consortium assisted by developing a 'Way of Working guideline for Working Groups', thereby actively facilitating the functioning and creation of working groups or taskforces to perform scoped activities, such as the development of sectoral information/analysis products. In addition, the consortium and the ER ISAC are cooperating to develop an IT platform which can be used for information sharing and analysis purposes.

For the

European **Energy ISAC**

The consortium has been actively engaged with the EE ISAC and vise versa. With an assessment model based on ENISA's framework for ISAC maturity, we helped the EE ISAC gain insights into potential areas for growth. The consortium assisted the EE ISAC with a stakeholder and governance analysis. Mostly focusing on organizational support, the facilitation plan for the EE ISAC also includes support and advice with the overall strategy development and the ISACs way of working.

EXAMPLES OF DELIVERABLES OF THE PROJECT

Way-of-working template

Proposing a method to enable taskforces, leading to quicker result of products

High-level blueprint 'how to start an ISAC'

Describing the early steps any ISAC should follow before officially launching the initiative in a sector

IT-Architecture

Describing the general set-up of any ISAC platform, including functionalities such as safe and secure messaging and conferencing tools, document repositories and MISP tools

EU ISAC Maturity Assessment

Based on ENISA's ISAC Maturity Framework, this assessment helps gain insights into the current level of maturity of an ISAC.

EXAMPLE OF A DELIVERABLE

How to organize a working group? (3/3)

For starting ISACs that require assistance on how to get started, we developed a document that explains how to organise working groups within the ISAC and work towards practical deliverables such as threat analysis reports.

This project has received funding from the European Commission's Directorate General CNECT under grant agreement number SMART2018/1022. The sole responsibility for the content of this outing lies with the Empowering EU ISACs Consortium and in no way reflects the views of the European Union.
